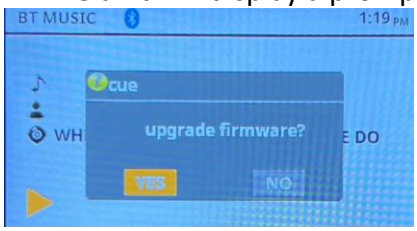
MXASB35V3 & MXSB24V3

FIRMWARE UPGRADE INSTRUCTIONS

This firmware upgrade applies to V3 soundbars that have a volume number that stops at 35.

This will increase volume output across all sources to 40.

1. Load the attached file onto an empty USB thumbdrive.
   make sure only the IMG file is on the thumbdrive
2. Turn on the unit.
3. Insert the thumbdrive into the USB dongle on the side of the soundbar.
4. The unit will display a prompt on the screen.



5. Press the volume knob for yes.
6. The soundbar will run the upgrade. The process takes about 20 seconds.

Once the upgrade is complete, the soundbar will restart and you can remove the thumbdrive from the dongle. Verify that the volume number has increased to 40 and the process is complete.
